

VFLEX

First Trust Alternative Opportunities Fund CLASS I SHARES

2ND QUARTER 2025

The Fund invests in securities with limited or no secondary market and are deemed to be illiquid. Valuation of illiquid securities is extremely limited. Portfolio holdings are priced either on a daily, monthly, and/or quarterly basis utilizing a variety of valuation methods such as proxy, matrix and third-party pricing. The accuracy of these valuations will vary, and actual tender price of the fund may be materially lower than any past valuation.

FIRST TRUST CAPITAL MANAGEMENT L.P. | 1-800-988-5196 | www.firsttrustcapital.com

FIRST TRUST CAPITAL SOLUTIONS (“FTCS”) FIRM OVERVIEW

FTCS is a joint venture between First Trust Capital Partners, LLC and VFT Holdings II L.P. FTCS offers various investment services through its operating units.

Private Asset Platform

Various principals of FTCS have been managing alternative investments for qualified advisory clients since the 1990s. The platform offerings have always included options from a list of select hedge fund, real estate and private equity managers through direct investments and allocation vehicles.

Investment Research

First Trust Alternative Investment Research (“FTAIR”) is a separate dedicated business unit that operates to support the Asset Management business in a variety of capacities and strategies. The team’s proprietary database and process is leveraged firm-wide and across our asset management strategies. FTAIR utilizes its expertise and extensive network to source private investments and has built a time-tested track record of offering highly-specialized strategies that seek to provide superior risk-adjusted returns.

Asset Management

First Trust Capital Management (“FTCM”) is a multi-disciplinary investment organization headquartered in Chicago, IL. FTCM has a broad investor base that includes family offices, high-net-worth families, and institutions with a focus on innovative alternative investment solutions. FTCM has internal investment teams specializing in merger arbitrage, private funds, multi-asset mandates and private real estate.

VFLEX – IMPETUS FOR THE FUND

What Pain Points Have We Identified Within Alternative Investments?

- Private Equity, Private Credit and Real Estate operators have begun to enter the registered investment space as investment of interval funds, tender offer funds and non-traded real estate investment trusts (REITs).
- Investors who previously failed to meet the net worth requirements or high investment minimums of unregistered funds can now access these asset classes, on a limited basis, through registered vehicles.
- While the democratization of private strategies is a positive, there are still paperwork, tender offer, cost and investment minimum hurdles associated with implementing a client solution.

How is VFLEX Different?

- VFLEX enables ALL investors to gain exposure to Private Equity, Private Credit, Real Estate and other investment strategies within one comprehensive, streamlined investment vehicle.
- VFLEX, as an interval fund, provides indirect exposure to certain asset classes that are not otherwise available to most investors. VFLEX requires less paperwork with fewer complexities compared to a direct investment in these asset classes.
- From a management perspective, the Fund's flexibility is key to constructing an alternative investment portfolio with a longer-term outlook.

VFLEX Offering

- Multi-manager, multi-alternative strategy diversified across the private asset class sectors of private equity, real estate, alternative credit, hedged strategies, co-investments and liquid alternatives.
- Targets absolute returns across market cycles through dynamic asset allocation and disciplined fund selection within each asset class sector.

Alternative investments may employ complex strategies, have unique investment and risk characteristics and may not be appropriate for all investors.

VFLEX – POTENTIAL BENEFITS OF THE INTERVAL FUND STRUCTURE

Fund Structures

	Interval Funds	Open-End Mutual Funds	Listed CEFs	LP Private Funds
Purchase	Click To Buy	Click To Buy	Click To Buy	Sub Docs
Liquidity*	Quarterly	Daily	Daily	Varies

No Accreditation
Requirement

Low Minimum
\$1,000 for I Share

Liquidity*
Offered Quarterly

1099
Tax Reporting

While FTCM has sought to design an interval fund that will reflect key characteristics and features such as no paperwork, accessible with no accreditation, quarterly liquidity (subject to limitations), no capital calls and 1099 reporting, investors should understand that such characteristics of its structure may deviate to varying degrees from those stated herein.

*The liquidity of interval funds, listed CEFs, and limited partnership private funds are subject to limitations. With respect to VFLEX, a limited number of shares are eligible for quarterly repurchase at net asset value. An investment in the Fund should be considered illiquid.

**While some interval funds charge performance fees, VFLEX does not.

VFLEX – PORTFOLIO CONSTRUCTION FRAMEWORK

Target Allocations

- VFLEX invests in interval funds, tender offer funds, non-traded REITs and other investment structures including direct co-investments to help provide better access to institutional alternative strategies, such as Private Equity, Real Estate, Alternative Credit, Hedged Strategies and Liquid Alternatives.
- Through a diversified, dynamic approach, the portfolio management team sets target allocations across private asset classes and then actively selects managers within those sectors to achieve potential outperformance.

Asset Class	Target ¹
Private Equity	Up to 30%
Real Estate	Up to 30%
Alternative Credit	Up to 30%
Hedged Strategies	Up to 30%
Co-Investments	Up to 45%

Current Weightings²

¹This represents a model portfolio for The First Trust Alternative Opportunities Fund (the “Fund”). The model portfolio is a portfolio that represents First Trust Capital Management’s view on what the Fund’s portfolio may look like under normal market conditions. The portfolio is actively managed and will seek to achieve its investment objective by utilizing a flexible asset allocation strategy across a wide array of asset classes and sectors. The weights are intended as guidelines and First Trust Capital Management may choose to focus on countries or regions, asset classes, industries and sectors to the exclusion of others at any time or from time to time based on market conditions and other factors. Model portfolio allocations should not be relied upon as an indicator of future results or used as the basis for investment decisions.

²Holdings as of 6/30/2025 and are subject to change.

VFLEX – SUB-STRATEGIES REVIEW

Alternative Asset Classes

Private Equity	The Private Equity sub-strategy seeks to provide exposure to secondary and primary investments in private equity and other private asset funds and, to a limited degree, to direct investments in operating companies.
Co-Investments	Top co-investment opportunities are typically only available to investors that have substantial allocations to a manager's existing private vehicle. FTCM sources these opportunities across direct lending, distressed credit, leveraged buyouts, mezzanine equity and growth capital opportunities.
Real Estate	The managers of the Fund's Real Estate private funds invest across multiple core real-asset type funds, including industrial, multi-family, retail, and office, in multiple geographies across North America with the potential to expand the holdings to include real-assets in Europe.
Alternative Credit	The managers employ a multi-sector approach spanning residential, commercial, corporate, consumer and specialty finance markets. The emphasis is on alternative credit investments, including private loans, illiquid credit and stressed/distressed credit.
Hedged Strategies	The objective is to construct a balanced portfolio of hedge funds across Arbitrage, Credit, Event Driven, Long/Short Equity and Multi-Strategy managers. The exposure aims to provide a core alternatives exposure that is uncorrelated to stocks and bonds.

Liquid Sub-Strategies

Closed End Fund Arbitrage	<p>The manager of the Closed-End Fund Arbitrage strategy has a core expertise in identifying themes in the closed-end fund ("CEF") universe that may cause constituents of that universe to trade at discounts or premiums to their underlying net-asset-value.</p> <p>The team looks for CEFs trading at a material discount to its NAV and then seeks to benefit from mean reversion of those discounts which historically ebb and flow due to cyclical and investor behavioral reasons.</p>
Structured Credit	<p>The manager of the Structured Credit strategy employs a top-down strategy to identify relative valuation opportunities within structured credit markets and a bottom-up credit selection process to selecting individual issuers.</p> <p>The managers will invest opportunistically across a wide range of credits and issuer types based on relative value within fixed income. Specifically, the strategy targets opportunities in: Residential Mortgage-Backed Securities (RMBS); Commercial Mortgage-Backed Securities (CMBS); Collateralized Loan Obligations (CLOs); and Asset-Backed Securities (ABS).</p>

VFLEX PERFORMANCE ATTRIBUTION – 2025 YTD

Net Performance Attribution By Asset Class (as of 6/30/2025)

Source: Lightkeeper Portfolio Analytics. 1/1/25 – 6/30/25.

Please note: Each of these assets have their own set of investment characteristics and risks to consider before investing. Please read the prospectus for more about these risks.

Performance data quoted represents past performance. Past performance is not a guarantee of future results and current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and shares when sold or redeemed, may be worth more or less than their original cost. You can obtain performance information which is current through the most recent month-end by visiting www.firsttrustcapital.com.

VFLEX PERFORMANCE – LOW VOLATILITY PROFILE

Daily Annualized Volatility

Data from 7/12/2017- 6/30/2025. Source: UMB. Time period is rolling 20-day volatility. Indexes are unmanaged and an investor cannot invest directly in an index. Please see index definitions at the end of this presentation. The asset classes shown here offer different characteristics in terms of income, tax treatment, capital appreciation and risk. Stocks are subject to risks such as an economic recession and the possible deterioration of either the financial condition of the issuers of the equity securities or the general condition of the stock market. Bonds are subject to fluctuations due to higher interest rates, economic recession, deterioration of the bond market or investors' perception thereof, possible downgrades and defaults of interest and/or principal.

Performance data quoted represents past performance. Past performance is not a guarantee of future results and current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and shares when sold or redeemed, may be worth more or less than their original cost. You can obtain performance information which is current through the most recent month-end by visiting www.firsttrustcapital.com.

VFLEX PERFORMANCE – LACK OF DOWNSIDE CAPTURE TO STOCKS

There have been 726 (out of 1,632) days in which the S&P 500 Index was down between 1/2/2019 and 6/30/2025*. On those 726 days in which equity markets were down:

- The S&P 500 Index averaged a return of -0.87%.
- VFLEX averaged a return of -0.01%.
- VFLEX only declined on 272 of those 726 days, or 37% of the time.

Source: UMB. Indexes are unmanaged and it is not possible to invest directly in an index. Please see index definitions at the end of this presentation.

*Fund mandate and portfolio construction was updated materially on 1/2019 to expand VFLEX to less-liquid alternative investments with unique illiquidity premiums.

Performance data quoted represents past performance. Past performance is not a guarantee of future results and current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and shares when sold or redeemed, may be worth more or less than their original cost. You can obtain performance information which is current through the most recent month-end by visiting www.firsttrustcapital.com.

VFLEX PERFORMANCE – DIFFERENTIATED RETURN FROM BONDS

- We believe VFLEX can provide a differentiated return stream from bonds.
- On down days for bond markets between 1/2/2019 and 6/30/2025*, the Bloomberg U.S. Aggregate Bond Index has lost an average of -0.27%.
- On those same down days for bonds, VFLEX has averaged up +0.03% with positive returns 58% of the time.

Source: UMB. Indexes are unmanaged and it is not possible to invest directly in an index. Please see index definitions at the end of this presentation.

*Fund mandate and portfolio construction was updated materially on 1/2019 to expand VFLEX to less-liquid alternative investments with unique illiquidity premiums.

VFLEX Inception Date: 6/12/2017. VFLEX Total Expense Ratio: 3.67%; Net Expense Ratio: 3.63%; Net Expense Ratio exclusive of Acquired Fund Fees and Expenses (AFF&E): 1.38%.

Pursuant to contract, First Trust Capital Management has agreed to waive fees and/or pay Fund expenses to prevent the annual net expense from exceeding 1.40% of the average daily net assets, excluding 12b-1 distribution and service fees and certain other expenses as described in the prospectus. Currently, the net expense ratio is the amount applied to each share's NAV. Expense limitations may be terminated or modified prior to their expiration only with the approval of the Board of Trustees of Fund. Unless it is terminated, the Expense Limitation and Reimbursement Agreement automatically renews for consecutive one-year terms.

*NAV represent the Fund's net assets (assets less liabilities) divided by the Fund's outstanding shares. Returns are average annualized total returns, except those for periods of less than one year, which are cumulative. The fund's performance reflects fee waivers and expense reimbursements, absent which performance would have been lower.

**Performance information for the indexes is for illustrative purposes only and does not represent actual fund performance. Indexes do not charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown. All Index returns assume that dividends are reinvested when they are received. Indexes are unmanaged and an investor cannot invest directly into an index.

VFLEX RISK CONSIDERATIONS

You should consider a fund's investment objectives, risks, and charges and expenses carefully before investing. Contact First Trust Capital Management at 1-800-988-5196 or visit www.firsttrustcapital.com to obtain a prospectus which contains this and other information about a fund. The prospectus should be read carefully before investing.

You could lose money by investing in a fund. An investment in a fund is not a deposit of a bank and is not insured or guaranteed. There can be no assurance that a fund's objective(s) will be achieved. Please refer to each fund's prospectus and Statement of Additional Information for additional details on a fund's risks. The order of the below risk factors does not indicate the significance of any particular risk factor.

Alternative investments may employ complex strategies, have unique investment and risk characteristics and may not be appropriate for all investors.

In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not have the desired result.

The investment manager and sub-advisors of a multi-managed fund make investment recommendations independently and they may not complement each other. This may result in an increase in the Fund's portfolio turnover rate and higher transaction costs and risks.

Market risk is the risk that a particular security, or shares of a fund in general may fall in value. Securities are subject to market fluctuations caused by such factors as general economic conditions, political events, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Shares of a fund could decline in value or underperform other investments as a result. In addition, local, regional or global events such as war, acts of terrorism, spread of infectious disease or other public health issues, recessions, natural disasters or other events could have significant negative impact on a fund.

Current market conditions risk is the risk that a particular investment, or shares of the fund in general, may fall in value due to current market conditions. For example, changes in governmental fiscal and regulatory policies, disruptions to banking and real estate markets, actual and threatened international armed conflicts and hostilities, and public health crises, among other significant events, could have a material impact on the value of the fund's investments.

The Fund is structured as an interval fund and has adopted a policy to make quarterly repurchase offers, at per-class NAV, of not less than 5% of the Fund's outstanding shares on the repurchase request deadline. There is no guarantee that shareholders will be able to sell all the shares that they want to sell in any repurchase offer. If a repurchase offer is oversubscribed, the Fund may repurchase only a pro rata portion of the shares tendered by each shareholder. The repurchase policy will decrease the size of the Fund over time and may force the Fund to sell assets. It may also reduce the investment opportunities available to it and cause its expense ratio to increase. In addition, the Fund may need to liquidate holdings earlier than desired, potentially resulting in losses and increasing portfolio turnover.

The Fund is subject to limited liquidity since shareholders will not be able to redeem shares daily or on demand. Shares are not transferable, and liquidity is only provided through repurchase offers made quarterly by the Fund. Fund holdings may be or may become illiquid.

A fund classified as "non-diversified" may invest a relatively high percentage of its assets in a limited number of issuers. As a result, a fund may be more susceptible to a single adverse economic or regulatory occurrence affecting one or more of these issuers, experience increased volatility and be highly concentrated in certain issuers.

Certain underlying funds are not registered under the securities laws and their portfolio holdings may not be disclosed. Unregistered funds may have less investor protection and transparency than registered funds.

Because the shares of CEFs cannot be redeemed upon demand, shares of many CEFs will trade on exchanges at market prices rather than net asset value, which may cause the shares to trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund may invest in the shares of other investment funds which involves additional expenses that would not be present in a direct investment in the underlying funds. In addition, the Fund's investment performance and risks may be related to the investment performance and risks of the underlying funds.

Collateralized loan obligations ("CLOs") carry additional risks, including, the possibility that distributions from collateral securities will not be adequate to make interest or other payments, the quality of the collateral may decline in value or default, the possibility that the investments in CLOs are subordinate to other classes or tranches, and the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results.

Certain fund holdings may be thinly traded or have a limited trading market and as a result may be characterized by the Fund as illiquid securities.

Mortgage-related securities are more susceptible to adverse economic, political or regulatory events that affect the value of real estate. They are also subject to the risk that the rate of mortgage prepayments decreases, which extends the average life of a security and increases the interest rate exposure.

Investments in companies that are the subject of a publicly announced transaction carry the risk the transaction is renegotiated, takes longer to complete than originally planned and that the transaction is never completed. Any such event could cause the Fund to incur a loss. The risk/reward payout of merger arbitrage strategies typically is asymmetric, with the losses in failed transactions often far exceeding the gains in successful transactions.

The stocks of companies that have recently conducted an initial public offering are often subject to price volatility and speculative trading. These stocks may have exhibited above average price appreciation in connection with the initial public offering prior to inclusion in the Fund. The price of stocks included in the Fund may not continue to appreciate and their performance may not replicate the performance exhibited in the past.

The use of derivatives, including futures, options, swap agreements, and forward contracts, can lead to losses because of adverse movements in the price or value of the underlying asset, index or rate, which may be magnified by certain features of the derivatives.

Short selling creates special risks which could result in increased gains or losses and volatility of returns. Because losses on short sales arise from increases in the value of the security sold short, such losses are theoretically unlimited.

The Fund's use of leverage may result in losses that exceed the amount originally invested and may accelerate the rates of losses.

The Fund may be subject to the risk that a counterparty will not fulfill its obligations which may result in significant financial loss to the Fund.

Certain securities held by the Fund are subject to call, credit, default, inflation, income, interest rate, extension, and prepayment risks. These risks could result in a decline in a security's value and/or income, increased volatility as interest rates rise or fall and have an adverse impact on the Fund's performance.

High yield securities, or "junk" bonds, are less liquid and are subject to greater market fluctuations and risk of loss than securities with higher ratings, and therefore, are considered to be highly speculative.

VFLEX RISK CONSIDERATIONS (CONTINUED)

The Fund invests in securities with limited or no secondary market and are deemed to be illiquid. Valuation of illiquid securities is extremely limited. Portfolio holdings are priced either on a daily, monthly, and/or quarterly basis utilizing a variety of valuation methods such as proxy, matrix and third-party pricing. The accuracy of these valuations will vary, and actual tender price of the fund may be materially lower than any past valuation.

Repurchase agreements typically involve the acquisition by the Fund of fixed-income securities from a selling financial institution such as a bank or broker-dealer. The Fund may incur a loss if the other party to a repurchase agreement is unwilling or unable to fulfill its contractual obligations to repurchase the underlying security. Reverse repurchase agreements involve the risk that the other party may fail to return the securities in a timely manner or at all. The Fund could lose money if it is unable to recover the securities and/or if the value of collateral held by the Fund, including the value of the investments made with cash collateral, is less than the value of securities.

Securities of micro, small- and mid-capitalization companies may experience greater price volatility and be less liquid than larger, more established companies.

Securities of non-U.S. issuers are subject to additional risks, including currency fluctuations, political risks, withholding, the lack of adequate financial information, and exchange control restrictions impacting non-U.S. issuers. These risks may be heightened for securities of companies located in, or with significant operations in, emerging market countries.

Changes in currency exchange rates and the relative value of non-US currencies may affect the value of the Fund's investments and the value of the Fund's shares.

Stocks with growth characteristics tend to be more volatile than certain other stocks and their prices may fluctuate more dramatically than the overall stock market.

A fund with significant exposure to a single sector may be more affected by an adverse economic or political development than a broadly diversified fund.

High portfolio turnover may result in higher levels of transaction costs and may generate greater tax liabilities for shareholders.

A fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. There is no assurance that a fund could sell or close out a portfolio position for the value established for it at any time.

Value stocks are subject to the risk that valuations never improve or that the returns on value stocks are less than returns on other styles of investing or the overall stock market.

Securities issued or guaranteed by federal agencies and U.S. government sponsored instrumentalities may or may not be backed by the full faith and credit of the U.S. government.

A fund is susceptible to operational risks through breaches in cyber security. Such events could cause a fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/ or financial loss.

First Trust Capital Management L.P. (FTCM) is the adviser to the Fund. The Fund's distributor is FTCM's affiliate, First Trust Portfolios L.P.

Index Definitions:

The **Bloomberg U.S. Aggregate Bond Index** represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. These major sectors are subdivided into more specific indices that are calculated and reported on a regular basis.

The **ICE BofA 3-Month US Treasury Index** measures the performance of U.S. Treasury securities maturing in 90 days and assumes reinvestment of all income.

The **S&P 500 Index** is an unmanaged index of 500 companies used to measure large-cap U.S. stock market performance.

IMPORTANT DISCLOSURE ABOUT FIRST TRUST
